Directional Light (DL) is a modeling tool in AutoCAD, that adds the ability to model lights, both non-directional and directional. It enables one to model and create a light's position, its view direction, how to lighten or darken an object (sometimes called "lighten with") and how light effects an object. Once modeled, a light can be repositioned, rotated, scaled, and other items can be applied to affect its direction. AutoCAD R14 introduced the ability to create compound radiance light and ambient radiance lights. CADQuery is an AutoCAD plugin that allows one to query data from other CAD programs in the same network by using the overheads, viewports and the query facilities of that CAD program. KiCAD is a free and open source CAD application based on Qt. It is an integral part of the open source KiCad EDA suite. The KiCAD design flow incorporates Autocad as well as Windows, OS X and Linux operating systems. It is free, open-source software, maintained and supported by the company Cadsoft.
